Senior Systems Dashboard

With **SENIOR SYSTEMS DASHBOARD**, each user can set up a single screen to display all the Senior Systems data that is needed to efficiently perform assigned tasks. Dashboard pulls data from any application and uses a mini-application, called a widget, to display the user-defined data in an intuitive graph and chart format. The user determines the number of widgets per screen, and the size, location, and data content of each widget. The number of widgets is limited only by the user's imagination.
