2. Updated Wait List approval process. When Summer Programs registrations were processed out of order, the system was allowing a student who registered onto a wait list to be given a seat if one was available at that time. This would then cause a student who did get a seat to be put on the wait list because that seat was no longer available during approval. The system will now keep the student on the wait list but will also show the school admin that as of that moment, there are seats potentially available.

3. Fixed issue with My Backpack supplemental links. Users who added supplemental documents for specific audiences and were not part of that audience, could not view the document after adding it.
4. Fixed error when viewing In Process Registrations in the Summer Programs area in My Backpack.

5. Fixed incorrect grade-level payment options showing in Online Enrollment. Parents were seeing options for grade levels to which they did not have any students enrolling into.

Radius Enhancements –

1. Modifying Signatory Names: The “Required Signatory (1 or 2)” field shown is now automatically populated with the Name/Contact of the user logged in.
A picture would be helpful here
2. Fixed an issue from the last update where emails were not being delivered.
